

## Digital Photography

---

This course covers technical aspects of photography. The course starts with a detailed study of the camera, film and photosensitive materials. Students learn basic techniques and elements of photography including light, composition, color, texture and depth. The course also covers advanced topics such as shutter speed, special effects and film development. Students have the opportunity to experiment with landscape and people photography, traditional and digital photography, film development, grayscale and color photography, still and motion photography, illustrative photography and photo-publishing. At the end of the course students are expected to show their work at Scuola's studio. A 35 mm camera is required for this course.
