## Module Details

<b>Module Title:</b>	Geographical Investigations
<b>Module Level:</b>	4
<b>Module Reference Number:</b>	UEL_4_GIN
<b>Credit Value:</b>	20 CAT points
<b>Student Study Hours:</b>	200
<b>Contact Hours:</b>	39
<b>Private Study Hours:</b>	161
<b>Pre-requisite Learning (If applicable):</b>	None
<b>Co-requisite Modules (If applicable):</b>	None
<b>Course(s):</b>	BA(Hons) Human Geography; BA(Hons) Urban and Environmental Planning
<b>Year and Semester</b>	2019/20, Semester 2
<b>Module Coordinator:</b>	Dr Philip Pinch
<b>MC Contact Details (Email, Room)</b>	<a href="mailto:pinchpl@lsbu.ac.uk">pinchpl@lsbu.ac.uk</a>
<b>Teaching Team &amp; Contact Details (If applicable):</b>	Dr Sam Johnson-Schlee <a href="mailto:johnss32@lsbu.ac.uk">johnss32@lsbu.ac.uk</a>
<b>Subject Area:</b>	Human Geography; Urban and Environmental Planning
<b>Summary of Assessment Method:</b>	100% Coursework. There are two components: <ul style="list-style-type: none"><li>• Coursework 1: Essay: Critical cartography: A deconstruction of three maps or GIS platforms (50% of total assessment)</li><li>• Coursework 2: A Psychogeographic dérive (50% of total assessment)</li></ul>

## 1. SHORT DESCRIPTION

A module that examines a range of ways in which geographical information is produced and communicated, with an emphasis on developing students' skills. It ranges in focus from the uses of Geographical Information Systems (GIS) by public agencies, such as local planning and transport authorities, to the importance of maps and spatial representations to private sector developers and to the way community groups understand their neighbourhoods and engage in battles over living spaces. The module also gets student to engage with the techniques and methodologies of psychogeographic exploration.

## 2. AIMS OF THE MODULE

The presentation and communication of geographical and environmental information through cartographic and other means (such as GIS and the Internet) are important skills for policy professionals, businesses and researchers. This module examines these mapping and representational processes and relevant techniques for the collection, manipulation, storage, analysis, and display of spatial information, including a basic understanding of GIS.

## 3. LEARNING OUTCOMES

On successful completion of this module, students will:

### 3.1 Knowledge and Understanding

Achieve knowledge and understanding of:

- The range of techniques for the collection and representation of geographical data relevant to political processes at a range of spatial scales.
- The importance of spatial data to the development and local plan process and the strategies adopted by stakeholders and participants in that process
- The socially constructed and contested nature of geographical information

### 3.2 Intellectual Skills

- Critical and reflective academic writing skills
- Spatial thinking
- An ability to evaluate and utilise conceptual ideas and concepts

### 3.3 Practical Skills

- Use appropriate simple spatial data manipulation and querying techniques for land use planning.

### 3.4 Transferable Skills

- Academic research and professional investigation in the planning field
- Oral presentations skills
- Working in groups
- Collecting, analysing, evaluating and synthesising planning data and trends

## 4. ASSESSMENT OF THE MODULE

This unit is 100% assessed by coursework and the pass mark for the unit is 40%. Students have to do two pieces of coursework. Each piece of coursework is worth 50% of the total marks.

Both pieces of coursework to be submitted via Moodle as advised.

- **Coursework 1: Essay: Critical cartography: a deconstruction of three political maps or planning GIS platforms (50% of total assessment)**

The aim of this assessment is for students to apply the 'critical cartography' skills they learn in the lectures to either:

- a) Three maps of their choosing. These maps should be interesting examples of how spaces and places are represented in map form. They might have a political, economic or cultural purpose. The key thing is for you attempt to 'deconstruct' the underlying purposes of the map, its political, economic or cultural meanings and the power relations underpinning these maps. Whose view of space and place is this? Whose views are excluded?

- b) Three contrasting local authority planning GIS platforms. There is considerable variety in the ways in which local councils communicate planning and development management information on-line and through the maps they produce in local plans. In this assessment you will develop a critical assessment of three different local councils' systems.

Whichever option you choose, the aim is that you think critically about how spatial information is produced and communicated:

- Who has produced this map and what kind of agencies or individuals?
- What is the purpose of this map and whom is the target audience?
- What strategies are being used by the producers of map to convey their message?
- What does the map tell us about dominant/less dominant power relations and the politics of persuasion?

**Coursework 2: A Psychogeographic *dérive*: Alternative mappings and understanding urban environments (50% of total assessment; 1,500 words equivalent)**

This assessment is inspired by the traditions of psychogeographic wondering which date back to the ideas most notably of Guy Debord and his fellow 'Situationists' (see: <http://www.psychogeography.co.uk/>). Psychogeography is the art of strolling, or just about anything that gets pedestrians off their predictable paths and leads them to a new awareness of the urban landscape. The *dérive*, or drift, was defined by the Situationists as the '...technique of locomotion without a goal', in which '...one or more persons during a certain period drop their usual motives for movement and action, their relations, their work and leisure activities, and let themselves be drawn by the attractions of the terrain and the encounters they find there'.

For this product we want you to design and then conduct your own psychogeographic 'derive' through some part of London (or an urban environment of your choosing) and to record your experiences and encounters, focussing in particular on what you as an urban planner/human geographer have seen, encountered and learnt.

**Assessment Criteria**

	%
Understanding of issues, ideas and techniques raised by the module:	60
Presentational skills	25
English and writing skills	15

## 5. FEEDBACK

Students can normally expect to receive written feedback after 15 working days. This will be sent via the Moodle VLE system. A sample of student work will be double marked internally. A sample will also be looked at by an external examiner for evaluation and approval.

## 6. INTRODUCTION TO STUDYING THE MODULE

### 6.1 Overview of the Main Content

A brief history of mapping. Cartography: art or science? Positioning the 'self' and 'others' on the map. Different national mapping traditions: the UK Ordnance Survey. Processes of mapping: selection, generalization, scale, distortion and style. Introduction to Geographical information systems (GIS). The politics of mapping: maps, campaigning and propaganda. Capitalism, colonialism and land ownership: cadastral mappings and land information systems (LIS). Geographical information systems (GIS) and planning. Development of GIS, applications, data collection, data bases, terminologies and presentation techniques. Spatial analysis using GIS: queries, reclassification, buffering and cookie cutting. The military, mapping and GIS. Perception, environment and behaviour: mental maps and space-time activities in urban space. Psycho-geography and the city: invisible city and edge city. Alternative mappings: eco mapping, humanist maps and parish maps. The visual languages of spatial planning: cross national cartographic communication techniques. Mapping and representing spatial data: stakeholders, interests and the politics of the development process.

### 6.2 Overview of Types of Classes

The module is focused around a series of keynote lectures and there will be some student-led seminars. Video presentations, linked to small group discussions, form part of the learning programme. There will also be self-directed study by students in groups in the computer laboratory. Guest speakers from planning practice will also feature in the programme of study.

### 6.3 Importance of Student Self-Managed Learning Time

Students will be expected to undertake self-directed reading of the subject matter to underpin and extend the knowledge and discussions explored during the taught sessions. Non-attendance at lectures and seminars / discussions is likely to prejudice a student's ability to successfully complete the module.

The anticipated teaching and learning will be achieved through the following indicative hours of activity:

Lectures:	26
Seminars and Workshops	13
Total Contact hours:	39
Reading to support lectures	80
Preparation for Coursework	81
Student managed learning hours:	161
Total learning time:	200

### 6.4 Employability

Geographical information skills and other forms of spatial literacy are important skills for employment within public and private sector organisations. This module provides the

opportunity within the course to develop these skills and in particular to understand the range of techniques used by the planning profession and other relevant agencies and stakeholders in and around the development process.

## 7. THE PROGRAMME OF TEACHING, LEARNING AND ASSESSMENT

Week	Lecture Topic	Tutor
1	An Introduction to the module: Processes and politics of mapping. Some basics about GIS: terminologies and uses of GIS	PP
	A (brief) history of mapping and 'critical cartography'. Positioning the 'self' and 'others' on the map.	PP
2	GIS and Development Management - Guest speaker: Eric Hermans, GIS Manager, London Borough of Wandsworth.	EH
	Workshop: Comparing local authority planning GIS systems; spatial information and public engagement	
3	GIS and Policy Plans - Guest speaker: Eric Hermans, GIS Manager, London Borough of Wandsworth	EH
4	Lecture: Deconstructing the map - Revisiting frameworks for cartographic critique. Discussion of Harley article and application to student examples.  Task: Bring in 2-3 maps selected for CW1 printed out in colour, ready to discuss with your peers. Workshop: Working in groups on applying these frameworks to maps or GIS systems selected for CW1.	S J-S
5	Psycho-geography and mapping the city's edge lands and invisible spaces. A psychogeographic derive – Connecting Ian Nairn's Southwark	PP
		PP
6	Maps, geopolitics and power; Mapping the nation and the Ordnance Survey	PP
	Workshop: Student workshop on 'derive' designs and strategies.	PP
7	The visual languages of mapping and cross national cartographic communication techniques. Maps, spatial representations of place and the politics of the development process.	PP
9	Mental maps: Perception, environment and behaviour.	PP
9	Lecture: Representations of London - Looking critically at historical and contemporary representations of London. Task: Reading Glass, Ruth. 1964. "Introduction" in London Aspects of Change London: MacGibbon & Kee	S J-S

10	Lecture: Writing, literature, and the challenge of representing urban space - how to write a city	S J-S
	Workshop: Practical exercise on how to write about space. Task: Read selection of literary sources on urban space	S J-S
10	Assessment 1 Hand-in Date - Critical Cartography Essay	
	<i>Easter</i>	
11	How Transport for London (TfL) use GIS: Guest Speaker - Vicki Gilham (GIS specialist, TfL)	PP/VG
	Workshop: Student workshop on their 'derive' experiences.	PP/S J-S
12	Module review and feedback	PP
13	Assessment 2 Hand-in Date – Student Psychogeographic Derive	

## 8. STUDENT EVALUATION

This module has been popular with students for a number of years. Over the years it has moved from a focus on the technical features and dimensions of to examine how planners use GIS packages in practice. The addition of a guest speaker from practice has strengthened this focus considerably. Moreover, the module has also been developed to address broader human geographical analysis of the ways in which geographical data is collected and represented. Students have found the design and implementation of their own psychogeographic derive an exciting and innovative form of assessment.

## 9. LEARNING RESOURCES

### 9.1 Core Materials

#### Books and articles: Critical cartography

Dodge, M., Kitchin, R and Perkins, C (eds) (2011) *The Map Reader: Theories of Mapping Practice and Cartographic Representation*, Wiley, London. Includes:

- Deconstructing the Map, *J.B. Harley*
- Power and Politics of Mapping, *Rob Kitchin, Martin Dodge and Chris Perkins.*
- 

Duhr, S (2007) *The Visual Language of Spatial Planning*, Routledge, London (Very theoretical and conceptual, but a good text). (307.12094 DUH)

Dorling, D and Fairbairn, D (1997) *Mapping: Ways of Representing the World*, Longman, London

Cloke, P., Crang, P and Goodwin, M (eds) (2014) *Introducing Human Geographies (3<sup>rd</sup> edition)*, Routledge, London. See Part 2, Section 2 'Cartographies':

## Digimap

The University has access to the Ordnance Survey's 'Digimap' service. Through this you can access a range of on-line mapping services. You will need to enrol. To do this you need to go to the Digimap access portal via the University Library website and follow the instructions to enrol as a student user. You will need to agree sign the licence agreements.

The more general Ordnance survey Website: <https://www.ordnancesurvey.co.uk/>

UK Land Registry: <https://www.gov.uk/government/organisations/land-registry>

## Quantum GIS (QGIS)

For an Open Source GIS tool the official site of Quantum GIS (QGIS): [www.qgis.org](http://www.qgis.org)

We have this loaded on our computers. There are easy to use tutorials at this site and a trial database.
