Module Title	Requirements Analysis and User Centred Design
Level	4
Reference	CSI_4_RAU
No.	
Credits	20
Student	Total: 200
Study Hours	Contact hours: 52
Dro	Student managed learning hours: 148
Requisites	None
Co-	None
requisites	
Excluded	None
combination	
S	
Module	TBC
coordinator	Division of Oceanation Ocian on and Information
Division	Division of Computer Science and informatics
Description	development process and user captered design. Analysis of the requirements is
Description	conducted for the purpose of studying a system or its parts in order to identify its
	objectives and includes eliciting, analysis and modelling of the requirements. The
	module explores the modelling of requirements from human, data and process
	centred perspectives. UML is used throughout. The module also includes human-
	centred design approach that focuses specifically on making systems usable. UCD
	follows a series of well-defined methods and techniques for analysis, design, and
	evaluation of software interfaces.
Aims	To provide students with fundamental knowledge of the analysis process and
	practical skills in modelling using UML tools and techniques in accordance with
	established good practice and industry standards. The students will also gain the
	methods and techniques for analysis design and evaluation of software
	interfaces
Learning	LO1: Knowledge and Understanding. You will be able to:
Outcomes	Describe and evaluate the key concepts of iterative, incremental
	development
	 Describe and compare a range of the most common tools and techniques
	for information systems requirements gathering and representation.
	(Assessed by Modelling Assignment)
	 Understand the need for user participation in the design process.
	LO2: Intellectual Skills. You will be able to:
	 Discuss and evaluate the human, social and management issues
	associated with information systems development.
	(Assessed by Modelling Assignment)
	Develop the ability to identify and use relevant information from a number
	of sources to evaluate design principles. (Maps to: BCS 2.2.1 a1-a9; 2.2.3
	LO3: Practical Skills. You will be able to:
	Use UML modelling tools and techniques to create graphical
	Assessed by Medelling Assignment
	Assessed by Modelling Assignment
	Describe the design characteristics of software arteracts.
	• vvrite reports supported by academic reading and argument. (Maps to:
	BUS 2.2.1 D1-D4; 2.2.3 a4-a6)
	LO4: Iransferable Skills. You will be able to:
	Demonstrate personal and team management skills including presentation
	and formal report writing.

	(Assessed by Modelling Assignment) (Maps to: BCS 2.2.1 c1-c2)
Employabilit y	The ability to identify requirements and communicate these effectively along with rigorous critical evaluation of the relative merits of alternative means realising these requirements and the associated skills sets are fundamental to a successful career in all branches of the IT industry. Also, the user interface continues to be a major determinant in whether a product is successful in the market or not. The skills acquired from this module should help increase employability by providing a firm basis in UCD. Jobs exist within the software development and User Experience (UX) industry.
Teaching	Weekly contact time will typically comprise of the following:
and	• A one hour 'lecture based' presentation, although this may take the form
Learning	of a Q&A interactive session, rather than a conventional lecture.
rattern	 Two-hour lab-based futorial where students will be given appropriate activities to practice the covered topic in the lecture
	 Two-hour lab-based workshop where students will be applying the
	acquired skills independently on practical projects
Indicative	Language, techniques and conceptual frameworks from the following thematic
Content	areas will be introduced and explored experientially:
	 Agree, relative approaches to software development Requirements specification
	Requirements analysis
	 Modelling Using Unified Modelling Language (tools and techniques) and
	CASE tools
	 User psychology and capabilities
	User classification
	Designing and prototyping
	 Usability evaluation and reporting
Assessment Elements &	COURSEWORK 100%
Assessment Elements & weightings	COURSEWORK 100%
Assessment Elements & weightings	COURSEWORK 100% Summative Assessment In-class Test will assess students' knowledge of requirements analysis (LO3)
Assessment Elements & weightings	COURSEWORK 100% Summative Assessment In-class Test will assess students' knowledge of requirements analysis (LO3) Modelling assignment - will assess students' practical skills of analysis of the requirements and use of UML modelling tools and techniques skills. (LO1, LO2&LO3)
Assessment Elements & weightings	COURSEWORK 100% Summative Assessment In-class Test will assess students' knowledge of requirements analysis (LO3) Modelling assignment - will assess students' practical skills of analysis of the requirements and use of UML modelling tools and techniques skills. (LO1, LO2&LO3) The coursework for UCD is expected to consist of a number of elements a major part of which will be concerned with the design of a prototype.
Assessment Elements & weightings	COURSEWORK 100% Summative Assessment In-class Test will assess students' knowledge of requirements analysis (LO3) Modelling assignment - will assess students' practical skills of analysis of the requirements and use of UML modelling tools and techniques skills. (LO1, LO2&LO3) The coursework for UCD is expected to consist of a number of elements a major part of which will be concerned with the design of a prototype. (Maps to: BCS 2.2.1 a1-a9; 2.2.3 a1-a3; b1-b4; c1-c2)
Assessment Elements & weightings	COURSEWORK 100% Summative Assessment In-class Test will assess students' knowledge of requirements analysis (LO3) Modelling assignment - will assess students' practical skills of analysis of the requirements and use of UML modelling tools and techniques skills. (LO1, LO2&LO3) The coursework for UCD is expected to consist of a number of elements a major part of which will be concerned with the design of a prototype. (Maps to: BCS 2.2.1 a1-a9; 2.2.3 a1-a3; b1-b4; c1-c2) Formative Assessment
